

Infants Needed For a Research Study

Are you an Expecting or New Mom?

Do you already have a child with autism?

Did you use any assisted reproductive technology to become pregnant (e.g., *in vitro* fertilization, Clomid, etc.)?

Do you have NO family history of any developmental disorders (e.g., autism, mental retardation, etc.)?

If any of these apply, the FOR OC KIDS INFANT SCREENING PROJECT is conducting a study to develop an Autism Screening Tool for infants under 6 months of age. Participation involves multiple developmental assessments and parental questionnaires over about 7 visits 1-18 months of age. You will be compensated with a \$20 gift card at each visit for participation in this study.
